Full Stack Developer Take-Home Test

Objective

Build a small to-do task management API and frontend. This test evaluates:

- Backend API design. Please use .NET Core.
- Data structure design. Please use SQL Lite or EF Core in memory.
- Frontend component design. Please use React or Vue.
- Communication between frontend and backend.
- Clean code, architecture structure, and thought process.
- Trade-offs and assumptions.
- Include a short README.md with setup steps and your explanation notes.
- Comments or a README.md explaining assumptions, scalability, and what you would implement in the future.
- Submit a GitHub repo link with both frontend and backend projects.
- **Please add any features you feel are required for a Production MVP.**
